Postman Installation Guide

FIELD	DETAILS
Product	Postman
Document Type	Installation Guide
OS/Platform	Windows
Version	12.2.2
Author	Gokul S Anand
Last Updated	March 18, 2026

Introduction

Postman is an API platform developed by Postman, Inc. This guide helps users to successfully download, install, verify, and uninstall the app.

Who This Guide Is For

This guide is intended for:

- Software Developers and IT Support Teams looking to install Postman on their Windows for the first time.
- Beginners with basic computer knowledge looking to install Postman on their Windows.

System Requirements

Component	Minimum	Recommended
OS	Windows 10 (64-bit)	Windows 11 (64-bit)
RAM	4GB	8GB
Disk Space	400MB	1 GB or more
Processor	64-bit x86 or ARM	Quad-core or better
Internet	Required	Stable broadband

> **Note:** Recommended specifications are based on general best practices. Official minimum requirements sourced from postman.com/downloads

> ⚠ **Warning:** Postman v9.4 was the last version to support 32-bit Windows. All versions after v9.4 require 64-bit Windows. Ensure your system is 64-bit before downloading.

Prerequisites

- ☐ Administrator access
- ☐ Your system meets the minimum system requirements.
- ☐ Stable internet connection
- ☐ Any previous version of Postman is uninstalled (for a clean installation)

Downloading Postman

Step 1: Visit the official website

Go to the Official website of Postman: https://www.postman.com/downloads/

> ⚠ **Warning:** Always download from the official website only. Avoid third-party download sites.

Step 2: Download the app

Click on **Windows x64** to download the installer file and wait for its completion

> 💡 **Tip:** Note where the file is downloaded - you will need it in the next step.

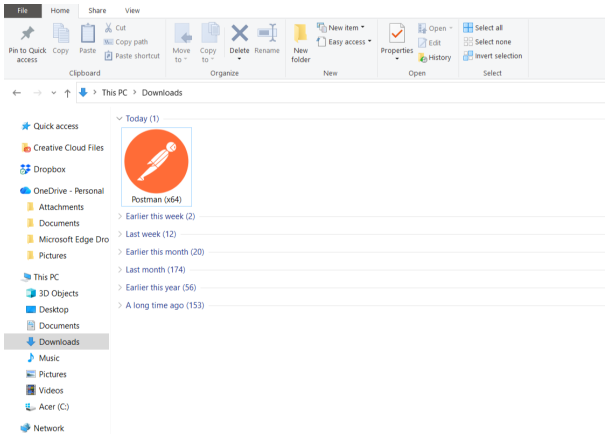
Expected Result: The installer file is downloaded successfully without any error

---

Installation Steps

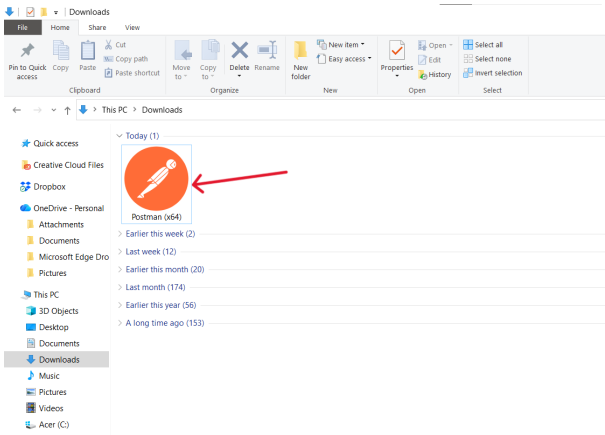
Step 1: Find the downloaded file

Go to the Downloads folder in your Windows.



Step 2: Install the app

Double-click Postman (x64) to start the installation process; Postman installs automatically.



Step 3: Launch Postman

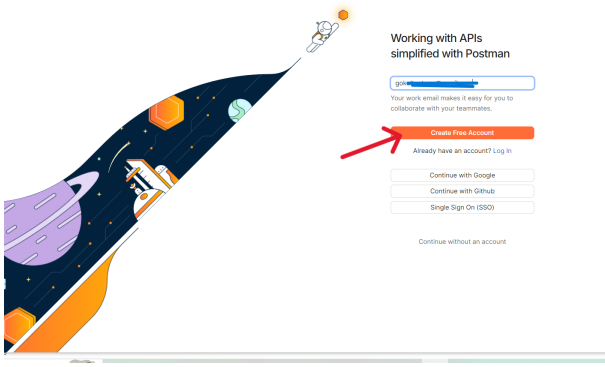
Postman opens automatically once installation is complete.

Expected Result: Postman is installed successfully without any errors.

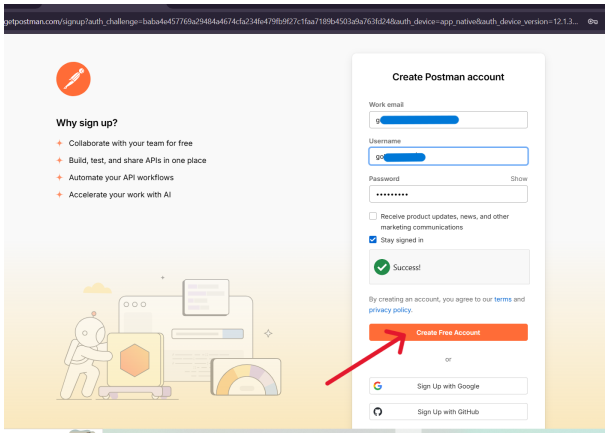
Post-Installation Setup

Step 1: Create a free account

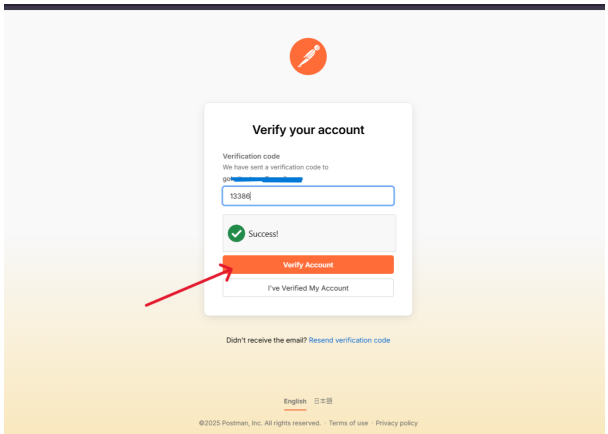
1. Enter your email address, and click **Create Free Account**.



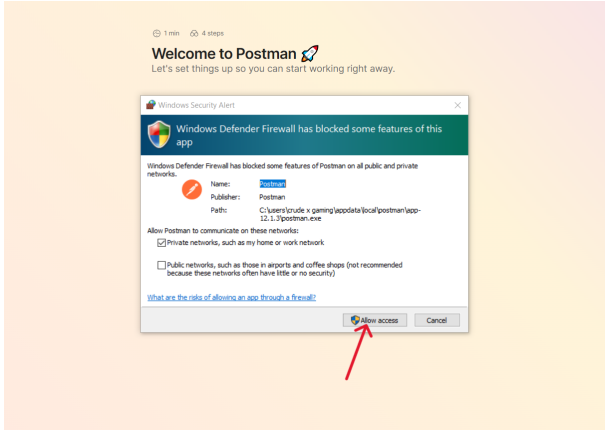
2. Set a name and password for your account; click **Create Free Account**.



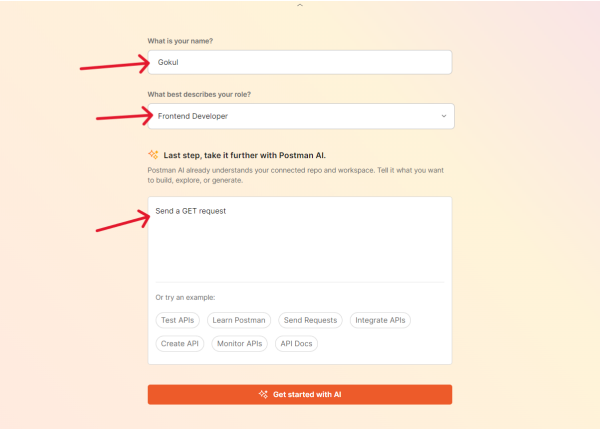
3. Verify the email by using the code sent to it.



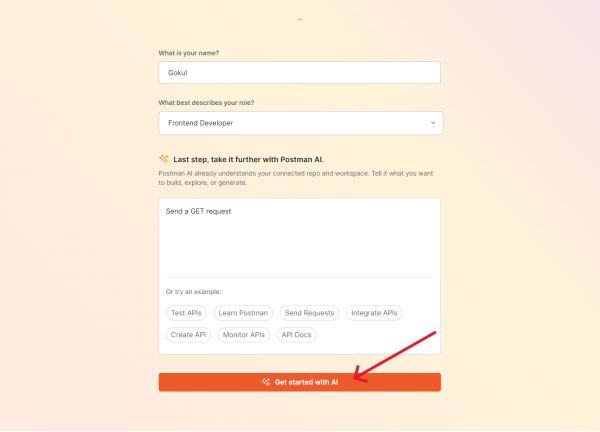
4. Click **Allow access** in the **window security alert tab**.



5. Enter your name and role for the workspace; write the request in the **request box**.



6. Click **Get started with AI**.

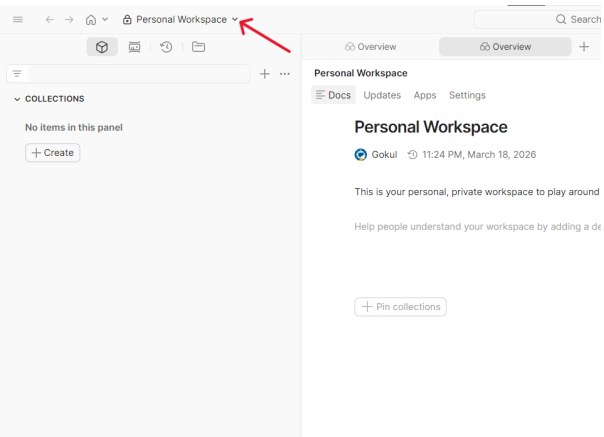


> 💡 **Tip:** Enter “Sent a GET request” in the request box for a start if you are confused.

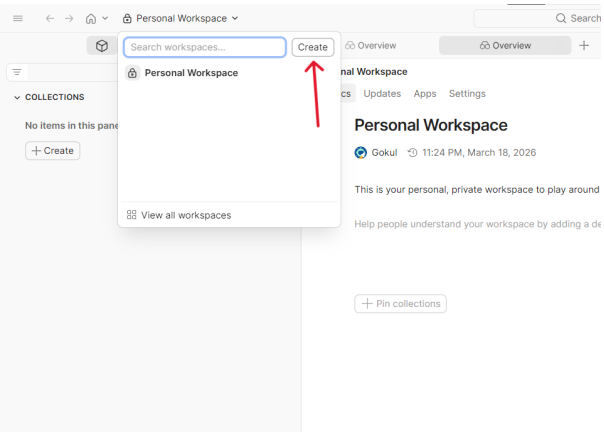
Expected Result: Account is created successfully without any errors.

Step 2: Create a new workspace

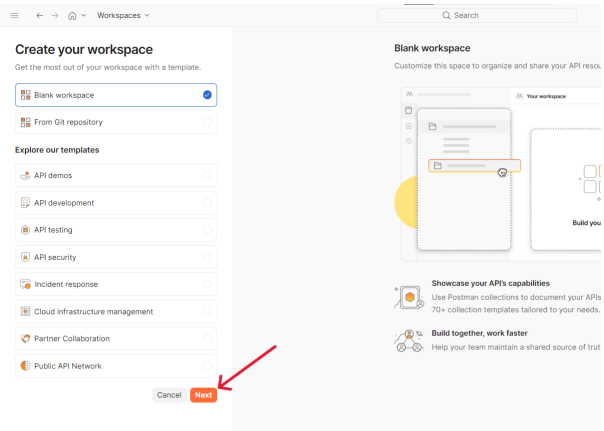
1. Click on the **drop-down icon** on the top left.



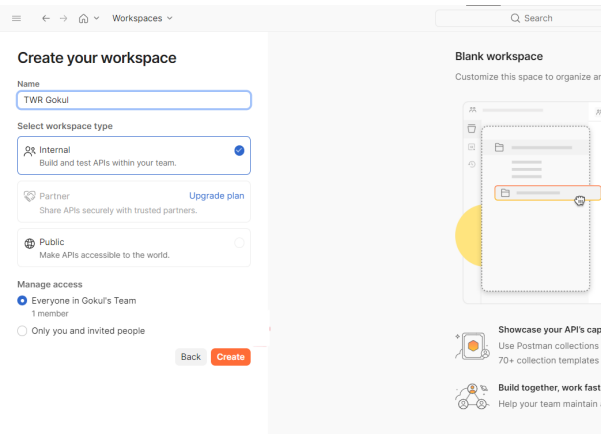
2. Choose **Create**.



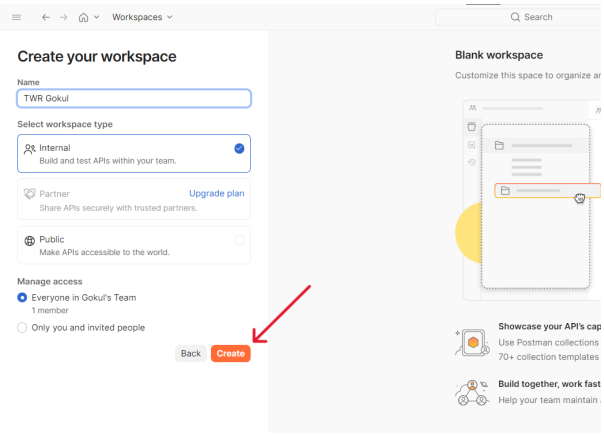
3. Tick according to your preference; click **Next**.



4. Enter the name for your workspace > select the **Workspace type**; choose the type of **Manage access**.



5. Click **Create**.

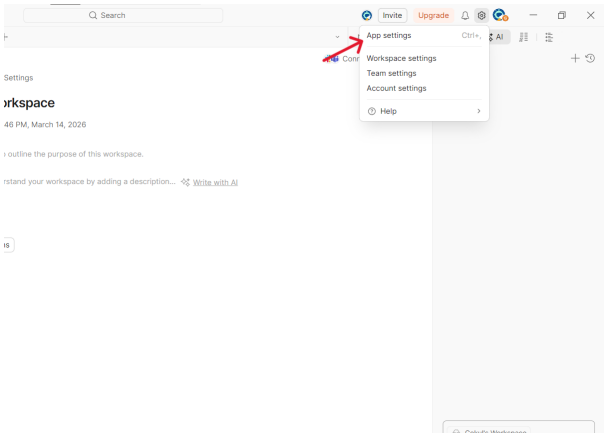


Expected Result: New workspace is created successfully.

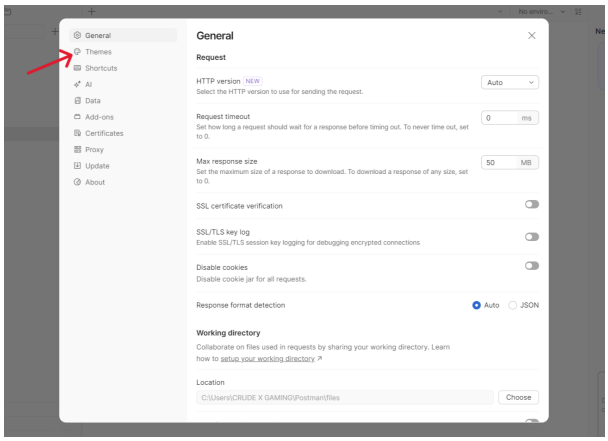
Step 3: Change the Color Theme

Steps:

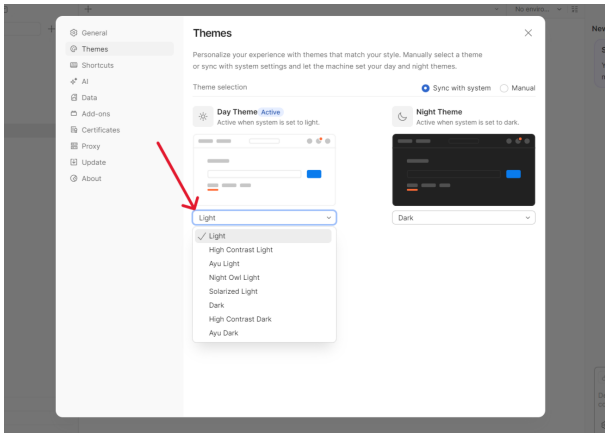
1. Click on the **Settings icon** > **App settings**.



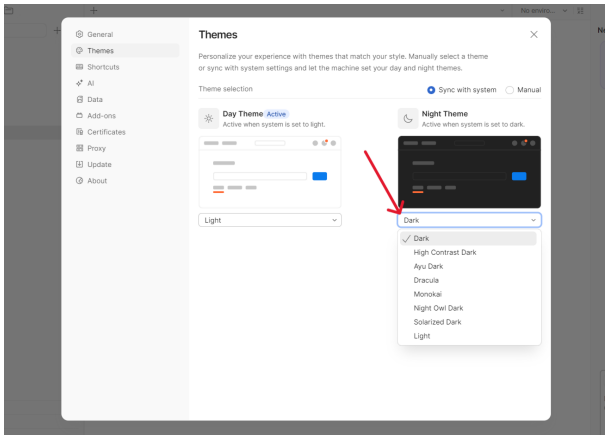
2. Choose **Themes**



3. Select the theme for daytime.



4. Select the theme for nighttime.



> 💡 **Tip:** Changing the color theme to dark is easier on the eyes during long sessions.

Expected Result: Color theme is changed successfully.

Verifying the Installation

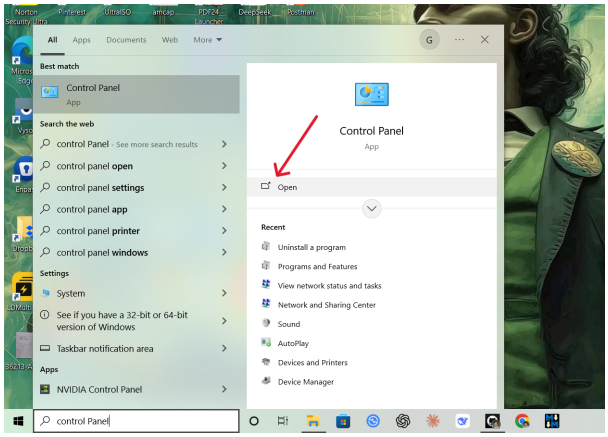
- ☐ Ensure Postman launches without any error.
- ☐ Verify the version is correct: Open Postman > Click **Settings** > **App settings** > **About**.
- ☐ Confirm that the basic features, such as creating a new request, integration, terminals, mock servers, and console, work properly.

Expected Result: Verification of Postman installation is successful.

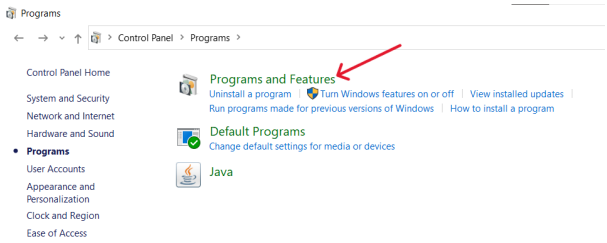
Uninstallation

Windows

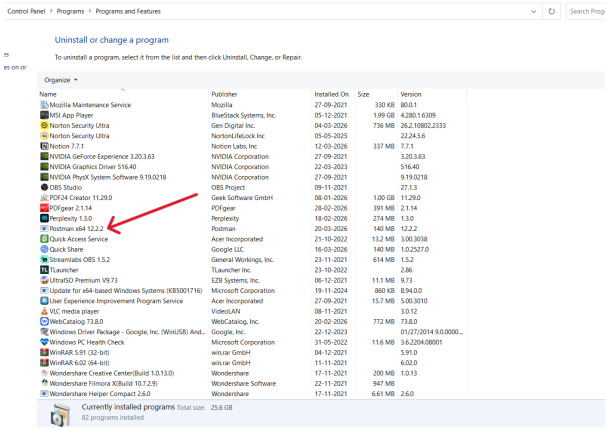
1. Open **Start menu** > search **Control Panel** > click **Open**



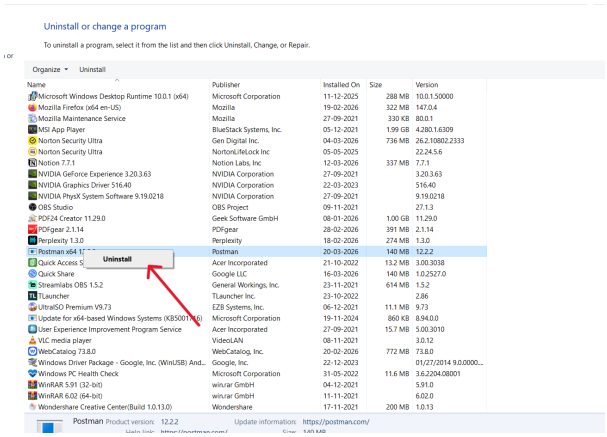
2. Click on **Programs** > **Programs and Features**



3. Search **Postman x64 12.2.2**



4. Right-click on the **Postman x64 12.2.2** > Click **Uninstall**



Expected Result: Postman is uninstalled from Windows without any errors.

Troubleshooting

Issue 1: Installing fails

Cause:

- Insufficient storage space to install Postman.
- System doesn't have the minimum requirements.
- Corrupted installer file.

Fix:

1. Ensure there is enough storage space for the installation.
2. Confirm your system has the minimum requirements to install the app: Open **Start menu** > **Settings** > **System** > **About**.
3. Ensure that the installer file is of the latest version. if not, download the latest version from the official website.
4. Attempt the action again.

> ⚠ **Warning:** Do not interrupt the installation process once it has started.

Expected Result: Postman is successfully installed on Windows.

Issue 2: App closing automatically

Cause:

- Outdated version of the app.
- Corrupted installer file.

Fix:

1. Update the app: **Menu** > **Help** > **Check for Updates** > **Update**.
2. Download the latest installer file from the official website and install it.

Expected Result: The automatically closing issue is resolved successfully.

Issue 3: Unable to Uninstall

Cause:

- Postman is still running in the background.
- Insufficient administrator permissions.

Fix:

1. Open **Task Manager** (**Ctrl+Shift+Esc**) and end any running Postman processes.
2. Ensure you have administrator access on Windows.
3. Restart the system.
4. Attempt the uninstallation again.

Expected Result: Postman is uninstalled successfully from Windows.

FAQ

Q1: Is the Postman app available on any mobile device?

A: No, the Postman app is not officially available on mobile devices, but you can access the web version on mobile.

Q2: Can I manually update the Postman app?

A: Yes, for updating the app manually, click on the **Menu icon** (**Three lines**) > **Help** > **Check for Updates** > if a new update is available, click **Update**.

Q3: The app is not opening. What should I do?

A: This may happen due to the insufficient system requirements/corrupted installer file. Confirm your system meets the minimum requirements and re-download the latest installer file from the official website.
