-

4. General FAQs

Q1. What is Gmail (Web version)?

A: Gmail (Web version) is the browser-based version of Gmail developed by Google that allows users to send, receive, and organize emails using a web browser.

Q2. Which operating systems are supported for using Gmail (Web version)?

A: Gmail (Web version) can be accessed on any operating system that supports a modern web browser, including Android, iOS, Windows, macOS, Linux, and ChromeOS.

5. Account & Login FAQs

Q1. How do I log into Gmail (Web version)?

A:

1. Open **Gmail (Web version)** on any browser
2. Enter your **email address** > click **Next**
3. Enter your **password** > click **Next**
4. Click **Sign in**

Q2. Why can't I log in to my account?

A: Ensure the system has a stable Internet connection and confirm the entered credentials are correct.

6. Email Sending and Receiving FAQs

Q1. How do I send an email through Gmail (Web version)?

A:

1. Click **Compose**.
2. Enter the recipient's email address in the **To** field.
3. Enter the subject and message.
4. Click **Send**.

Q2. How do I view the messages I received?

A: Incoming emails are displayed in the Inbox folder by default.

7. Feature FAQs

Q1. How do I change the maximum page size?

A:

1. Click **Settings**.
2. Select **See all settings**.
3. Under the **General tab**, locate **Maximum page size**.
4. Select the preferred number of conversations per page.
5. Click **Save Changes**.

Q2. How do I archive a mail?

A:

1. Select the mail you want to archive.
2. Right-click and select **Archive**

8. Troubleshooting FAQs

Q1. Why does my email fail to send?

A: Mail failures may occur due to an incorrect address or an unstable Internet connection. Verify the recipient's email address and check your Internet connection.

Q2. Why can't I receive emails?

A: Email receiving failure may occur due to insufficient space on the Google Account. Delete unnecessary emails and permanently remove them from the **Trash** to free up storage space.

9. Security & Privacy FAQs

Q1. Is user data encrypted in Gmail (Web version)?

A: Yes, in Gmail (Web version), user data is encrypted in transit using HTTPS (TLS) and encrypted at rest on Google's servers to ensure security.

Q2. How is personal information protected in Gmail (Web version)?

A: Personal information in Gmail (Web version) is protected through HTTPS (TLS) encryption, data encryption at rest, spam and phishing protection, and advanced security systems managed by Google.
