- 12. Support & Contact
- 13. License & Compliance

Who This Guide Is For

This guide is intended for:

- Software Developers and IT Support Teams looking to install Postman on their Windows for the first time.
- Beginners with basic computer knowledge looking to install Postman on their Windows.

System Requirements

COMPONENT	MINIMUM	RECOMMENDED
OS	Windows 10 (64-bit)	Windows 11 (64-bit)
RAM	4GB	8GB
Disk Space	400MB	1 GB or more
Processor	64-bit x86 or ARM	Quad-core or better
Internet	Required	Stable broadband

 **Note:** Recommended specifications are based on general best practices. Official minimum requirements sourced from postman.com/downloads

 **Warning:** **Postman v9.4** was the last version to support **32-bit Windows**. All versions after **v9.4** require **64-bit Windows**. Ensure your system is **64-bit** before downloading.

Prerequisites

- ☐ Administrator access
- ☐ Your system meets the minimum system requirements
- ☐ Stable internet connection
- ☐ Any previous version of Postman is uninstalled (for a clean installation)

Downloading Postman

Step 1: Visit the official website

Go to the Official website of Postman: <https://www.postman.com/downloads/>

⚠ **Warning:** Always download from the official website only. Avoid third-party download sites.

Step 2: Download the app

Click on **Windows x64** to download the installer file and wait for its completion.

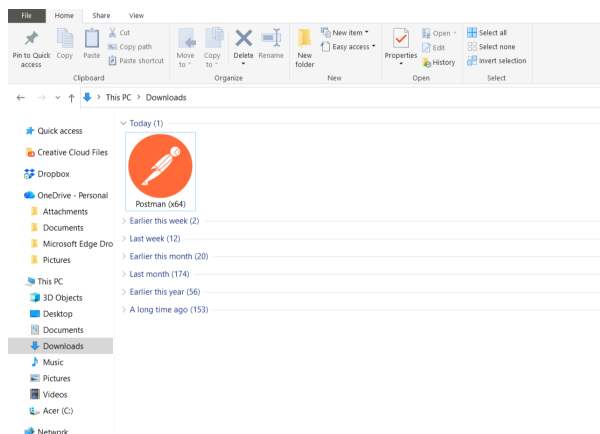

💡 **Tip:** Note where the file is downloaded, you will need it in the next step.

Expected Result: The installer file is downloaded successfully without any error.

Installation Steps

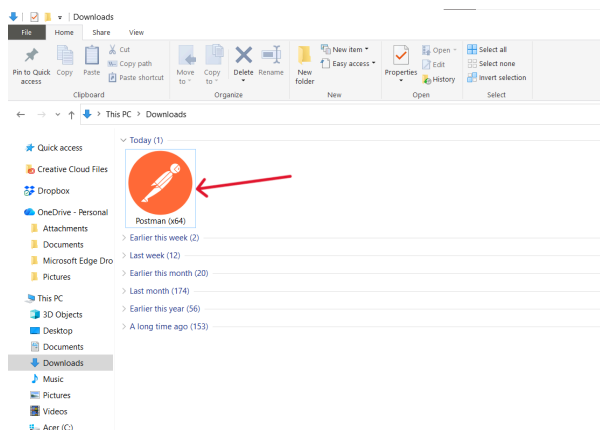

Step 1: Find the downloaded file

Go to the **Downloads folder** in your Windows.

Step 2: Install the app

Double-click **Postman (x64)** to start the installation process; Postman installs automatically.

Step 3: Launch Postman

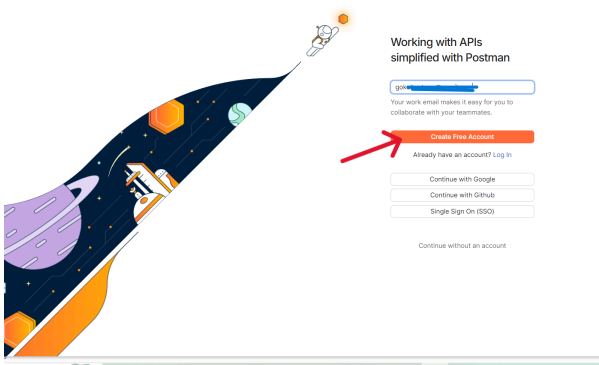

Postman opens automatically once installation is complete.

Expected Result: Postman is installed successfully without any errors.

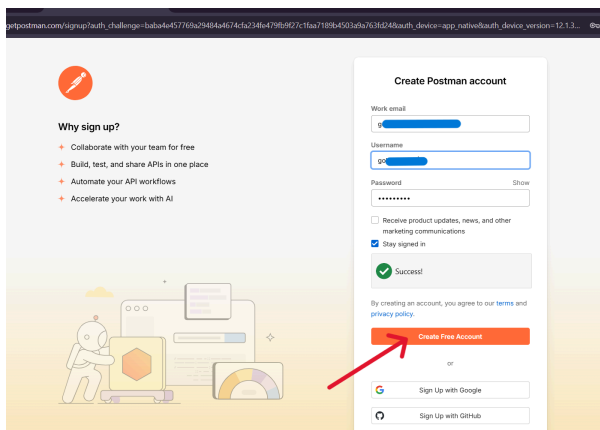

Post-Installation Setup

Step 1: Create a free account

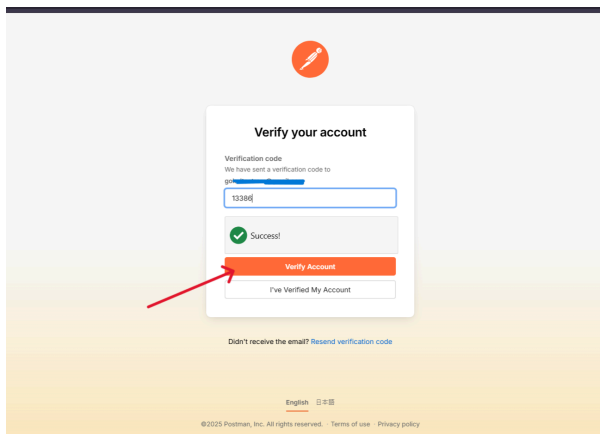

1. Enter your email address, and click **Create Free Account**.

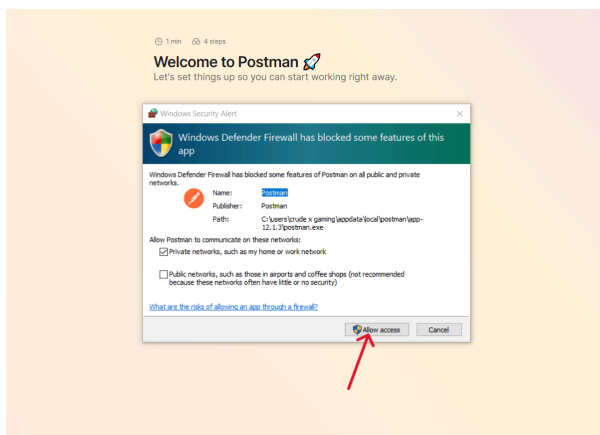

2. Set a name and password for your account; click **Create Free Account**.

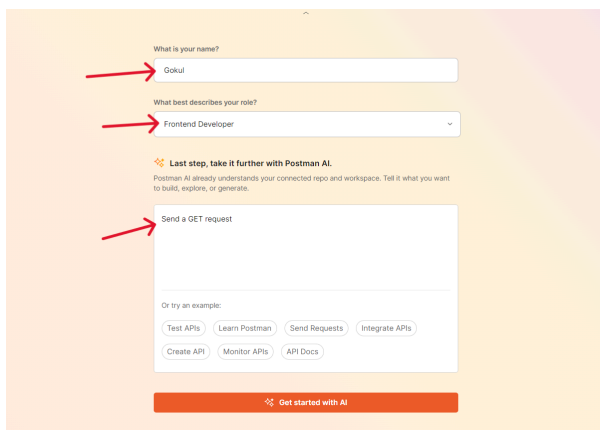

3. Verify the email by using the code sent to it.

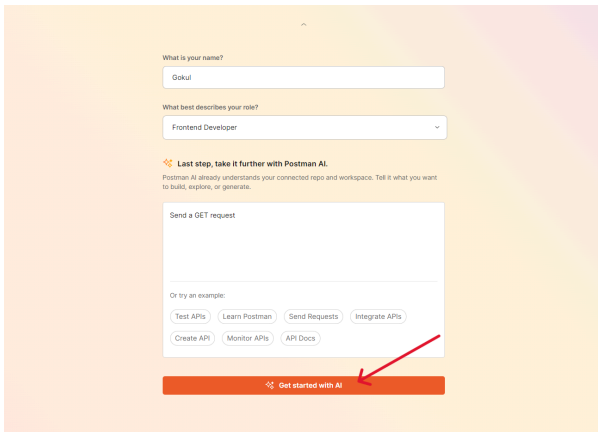

4. Click **Allow access** in the **window security alert tab**.

5. Enter your name and role for the workspace; write the request in the **request box**.

6. Click **Get started with AI**.

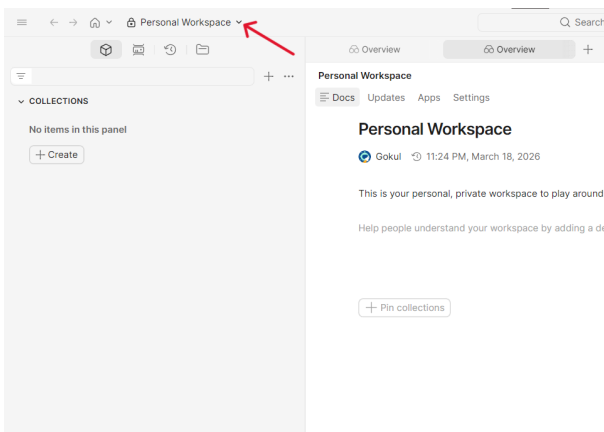

💡 **Tip:** Enter “Sent a GET request” in the request box for a start if you are confused.

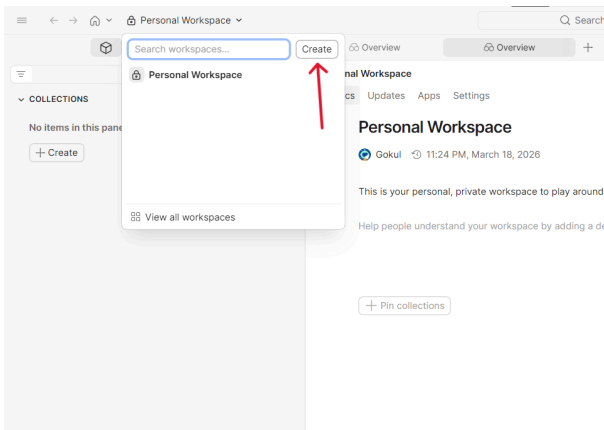

Expected Result: Account is created successfully without any errors.

Step 2: Create a new workspace

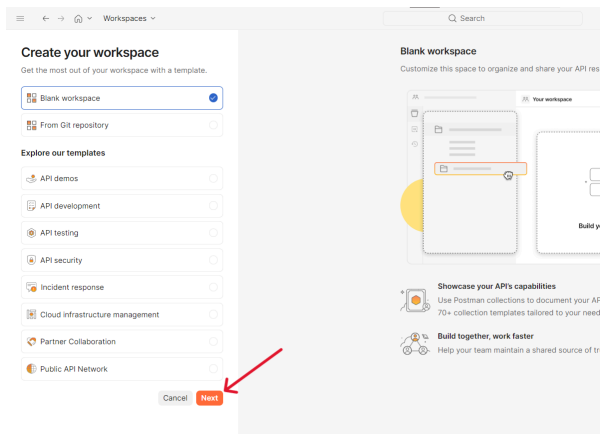

1. Click on the **drop-down icon** on the top left.

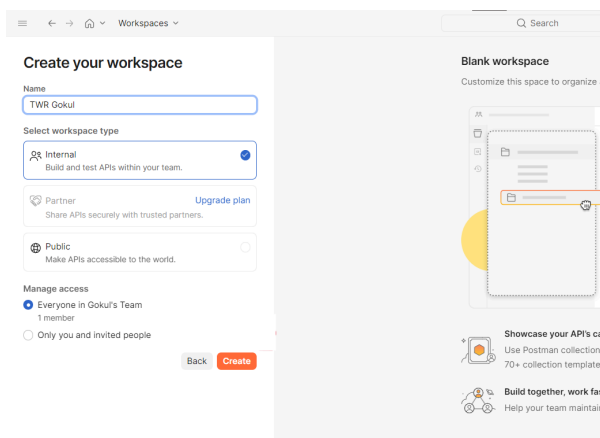

2. Choose **Create**.

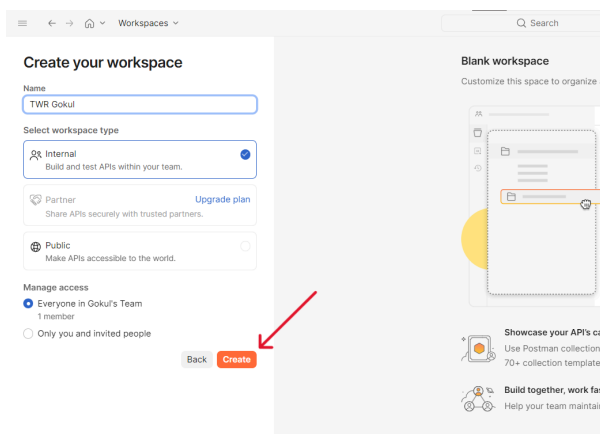

3. Tick according to your preference; click **Next**.

4. Enter the name for your workspace > select the **Workspace type**; choose the type of **Manage access**.

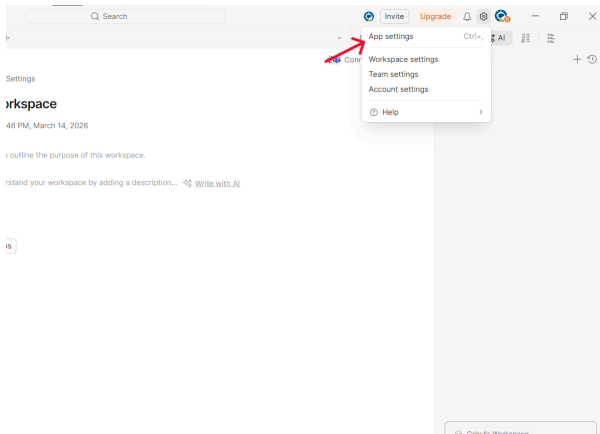

5. Click **Create**.

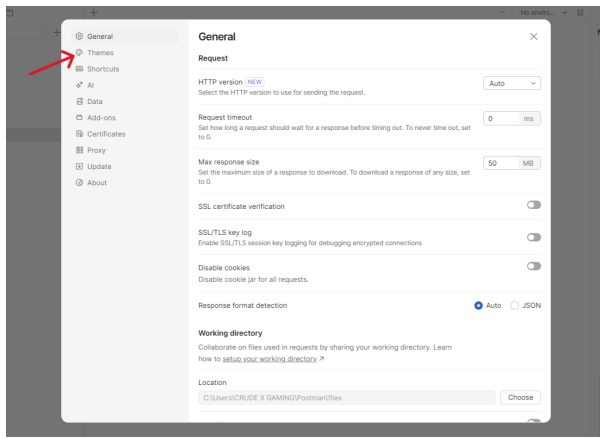

Expected Result: New workspace is created successfully.

Step 3: Change the Color Theme

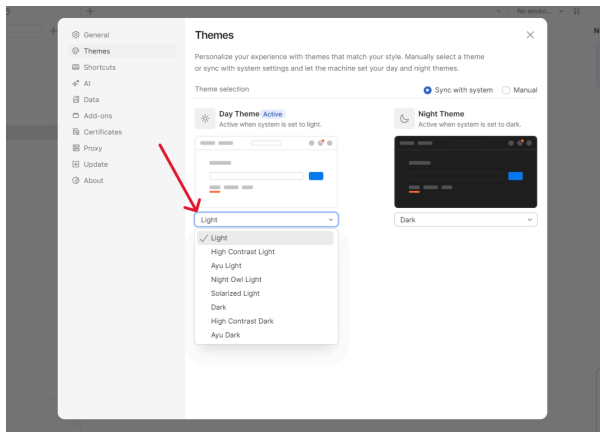

1. Click on the **Settings icon** > **App settings**.

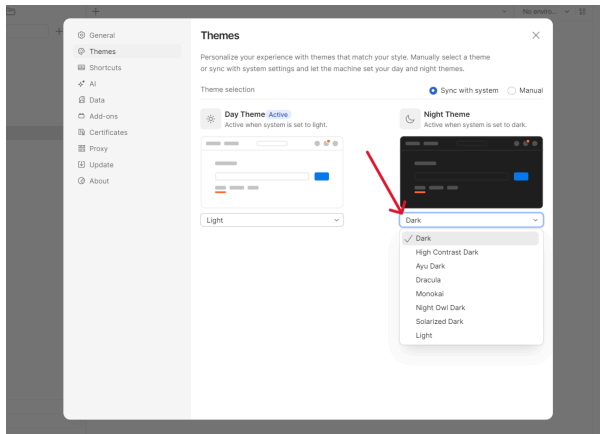

2. Choose Themes.

3. Select the theme for daytime.

4. Select the theme for nighttime.

💡 **Tip:** Changing the color theme to dark is easier on the eyes during long sessions.

Expected Result: Color theme is changed successfully.

Verifying the Installation

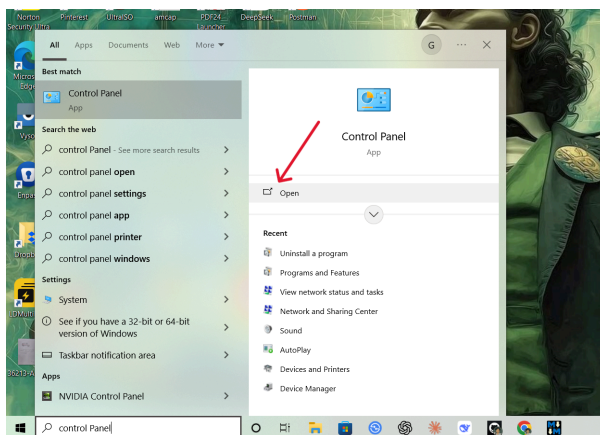

- ☐ Ensure Postman launches without any error
- ☐ Verify the version is correct: Open Postman > Click **Settings** > **App settings** > **About**
- ☐ Confirm that the basic features, such as creating a new request, integration, terminals, mock servers, and console work properly

Expected Result: Verification of Postman installation is successful.

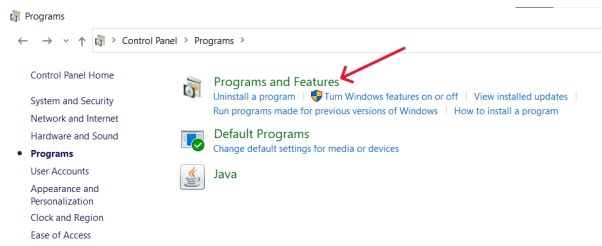

Uninstallation

Windows

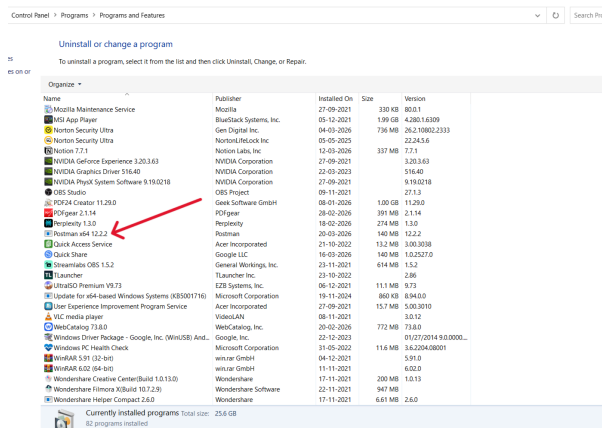

1. Open **Start menu** > search **Control Panel** > click **Open**.

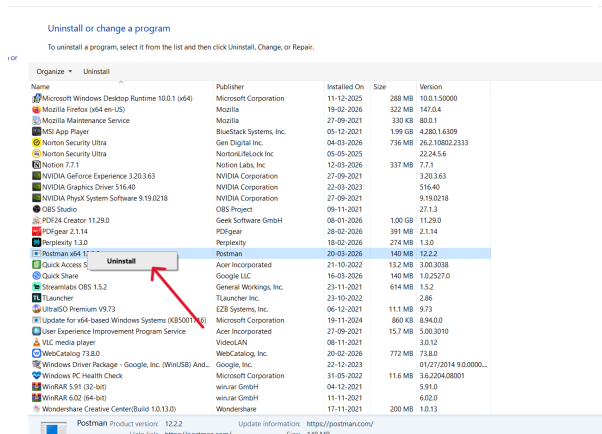

2. Click on **Programs** > **Programs and Features**

3. Search **Postman x64 12.2.2**.

4. Right-click on the **Postman x64 12.2.2** > Click **Uninstall**.

Expected Result: Postman is uninstalled from Windows without any errors.

Troubleshooting

Issue 1: Installing fails

Cause:

- Insufficient storage space to install Postman.

- System doesn't have the minimum requirements.
- Corrupted installer file.

Fix:

1. Ensure there is enough storage space for the installation.
2. Confirm your system has the minimum requirements to install the app: Open **Start menu > Settings > System > About**
3. Ensure that the installer file is of the latest version. If not, download the latest version from the official website.
4. Attempt the action again.

 **Warning:** Do not interrupt the installation process once it has started.

Expected Result: Postman is successfully installed on Windows.

Issue 2: App closing automatically

Cause:

- Outdated version of the app.
- Corrupted installer file.

Fix:

1. Update the app: **Menu > Help > Check for Updates > Update**
2. Download the latest installer file from the official website and install it.

Expected Result: The automatically closing issue is resolved successfully.

Issue 3: Unable to Uninstall

Cause:

- Postman is still running in the background.
- Insufficient administrator permissions.

Fix:

1. Open **Task Manager (Ctrl+Shift+Esc)** and end any running Postman processes.
2. Ensure you have administrator access on Windows.

3. Restart the system.
4. Attempt the uninstallation again.

Expected Result: Postman is uninstalled successfully from Windows.

FAQ

Q1. Is the Postman app available on any mobile device?

A: No, the Postman app is not officially available on mobile devices, but you can access the web version on mobile.

Q2. Can I manually update the Postman app?

A: Yes, for updating the app manually, click on the **Menu icon (Three lines)** > **Help** > **Check for Updates** > If a new update is available, click **Update**.

Q3. The app is not opening. What should I do?

A: This may happen due to the insufficient system requirements/corrupted installer file. Confirm your system meets the minimum requirements and re-download the latest installer file from the official website.
